Former Head of the Palliative Care

Unit of the Hospital Center

26400 CREST

#### TESTIMONIAL ON THE CARE OF A PATIENT BY Mrs Natacha CHETRITT-BONNEYRAT AUDIOLOGIST

In this testimonial, I'd like to mention the effectiveness of Mrs. BONNEYRAT's treatment of a patient for whom I hadn't found any effective therapies.

The patient was a young man of 23 years of age, who was under my care as a member of the Mobile Palliative Care Team at Crest Hospital.

The patient had been suffering from extremely painful, disabling hyperacusis for two years, remaining locked in his room all day, as the slightest noise triggered pain that could last for several hours. He didn't eat with his family because the clinking of a fork on a plate triggered his pain, he couldn't leave the house because the sound of an airplane triggered it... and he had stopped studying.

Of course, he had been treated by the best ENT doctors in Marseille, Paris, Béziers, and Geneva, and had undergone numerous alternative treatments and hearing aid specialists without success, with symptoms gradually worsening. During my treatment, he was being followed by a neurologist.

Of course, he had been treated by the best ENT doctors in Marseille, Paris, Béziers, and Geneva, and had undergone numerous alternative treatments and hearing aid specialists without success, with symptoms gradually worsening.

During my treatment, he was being followed by a neurologist. For two years, I tried to relieve his pain, partially succeeding, but without being able to help him return to a normal life. I read a lot about the treatment of painful hyperacusis without finding anyone who could help me. A lovely psychiatrist from a regional psychiatry center, who had already relieved several patients, offered to treat him without sufficient effect...

The patient having learned about ØREBLUE®, I encouraged him to give it a try. From what I understood, Ms. BONNEYRAT's technique consists of gradually "desensitizing" the patient by applying filters to attenuate the frequencies that trigger the pain...

The patient having learned about ØREBLUE®, I encouraged him to try it. From what I understand, Ms. Bonneyrat's technique involves gradually "desensitizing" the patient by applying filters to attenuate the frequencies that trigger the pain.

After two years of this therapy, at a rate of 6 to 7 sessions per year, this young man, now 28, has returned to a normal life. He is no longer handicapped by his hyperacusis, which has greatly reduced.

He lives a normal life, drives a gasoline-powered car, flies, and has enrolled in college to continue his studies. I am obliged to acknowledge that this spectacular improvement (I could even use the term "cure") is due to Ms. Bonneyrat's care, and to her alone.

I simply supported the patient in this process. I am delighted that he was able to meet this hearing care professional and thank her for her care.

This testimony is provided to assert and serve its legal purpose.
